## 1. Sussex Air Quality Alert Service

The Sussex Air Quality Alert service was developed by the Sussex Air Quality Partnership (“Sussex-air”), which is made up from the Sussex local authorities and Public Health bodies. Bureau Veritas provides this service on behalf of the Sussex Air Quality Partnership.

The Sussex Air Quality Alert service was established over 15 years ago to provide a Sussex-wide air pollution forecasting and alert service to support vulnerable persons such as those with respiratory and heart conditions and the public.

- The service provides pollution alerts direct to subscribers for “FREE” via different delivery methods such as text/SMS, email, or telephone message to landlines.
- The Alerts are sent to subscribers 24 to 48 hours prior to an episode of elevated air pollution.
- Subscribers can select either the general area alerts for East or West Sussex or to specific areas more representative of where they live or work.
- Subscribers can cancel the service at any time.

Further details on the service and live pollution forecasts are shown on the homepage <https://sussex-air.net/>

### 1.1 How the Alert Service works

Air quality is measured for a variety of pollutants and can have a variety of effects on different people in society. The UK Air Quality Banding system is used to inform the public about the levels of pollution that they may be exposed to and are based on health advice approved by the Committee on Medical Effects of Air Pollution Episodes (COMEAP).

The system uses an index divided into four bands to provide more detail about air pollution levels in a simple way; these bandings range from Low, Moderate, High to Very High. The overall air pollution index is calculated from the highest index value of five pollutants: nitrogen dioxide, sulphur dioxide, ozone, carbon monoxide and particles < 10µm (PM<sub>10</sub>). The bandings, pollutant concentrations and periods of exposure are provided in Appendix A.

Using the national UK Met Office air pollution service, we check and send out air pollution alerts only when pollution levels are likely to affect people’s health. Forecasts of air quality are generated daily and cover a 5-day period and are available 365 days of the year.

Alerts are only sent if:

- air quality is forecast to be “Moderate” or above on the day of the forecast; or
- on any of the other 4 days within the 5-day forecast period.

Alerts are sent;

- in the morning and sent by mid-day each day; and
- cover a 5-day period.

Subscribers will be sent the alert if:

- there is an alert for an area they are subscribed to which is “Moderate” or above; and
- an alert is forecast for the present day or one day over the following 4 days.

We will not resend alerts if:

- the air pollution levels stay the same or go back down to “Low”.

We will only send alerts if:

- the level changes to “High” or “Very High” in that period.

## 2. Service Users – February 2024

### 2.1 Service users in 2024

The service users reported here are those that have been subscribed since February 2024. Table 2-1 shows the subscribers and delivery method type for the service.

**Table 2-1: New Subscribers 2023**

Service type	Email	Text/SMS	Voice message
<b>Pre 2024</b>	<b>357</b>	<b>280</b>	<b>5</b>
<b>January</b>	2	2	0
<b>February</b>	2	0	0
<b>Total Subscribers to date</b>	<b>361</b>	<b>282</b>	<b>5</b>

Note: The total number of subscribers can vary from month to month, with some leaving as well as new people subscribing. The total at the end of the period includes all those who stayed with the service plus new recruits and leavers, hence the difference in the totals.

The alert service is delivered mainly by email (361 users) and text/SMS (282 users) services, these account for 55.7% and 43.5% of the users respectively. The remaining (5) 0.8% of users still prefer to receive alerts via land-line telephone voice messages.

**Table 2-2 Total Subscribers**

<b>Total Number of Subscribers as of end of February 2024 by all Communication Methods</b>	<b>648</b>
--	------------

### 3. Air Quality Forecasts and Alerts – February 2024

Air quality forecasts are produced daily, as described in section 1, with alerts only being issued when above the “Moderate” Daily Air Quality Index (DAQI) level.

#### 3.1 Forecasts

There are 31 area forecasts produced daily, which can vary slightly dependent on conditions, locations and other model forecast factors the Met Office determines. The full list of DAQI days for all 31 sites in 2024 (January to February) is provided in Appendix B and Table B-1 sets out the number of days that were categorised as ‘low’, ‘moderate’, ‘high’ and ‘very high’ at the alert area locations. These data demonstrate the variance in the numbers of DAQI days across different locations.

Table 3-1 shows the number of forecast DAQI days in February 2024 at selected sites. It can be found that on average, there are no day where Moderate, High or Very High pollution forecasted across the selected sites.

**Table 3-1: Number of forecast DAQI days in 2024 (February) at selected sites**

Alert location	Low (1-3)	Moderate (4-6)	High (7-9)	Very High (10)
Brighton	29	0	0	0
Chichester	29	0	0	0
Eastbourne	27	2	0	0
East Grinstead	29	0	0	0
Hastings	27	2	0	0
Haywards Heath	29	0	0	0
Horsham	29	0	0	0
Lewes	29	0	0	0
Rye	28	1	0	0
Worthing	29	0	0	0
<b>Average</b>	<b>29</b>	<b>1</b>	<b>0</b>	<b>0</b>
<b>Percentage of period</b>	<b>98%</b>	<b>2%</b>	<b>0%</b>	<b>0%</b>

The data shown in the table is rounded to the integers.

The full set of 31 sites data identifies that most days were ‘low’ air pollution days between January to February 2024 accounting for on average 45.5 out of 46 days (99%). There were, on average, 0.5 day across the region that were forecasted as ‘moderate’ air pollution days, which accounted for 1% of days during this period. There were no days where ‘high’ pollution and ‘very high’ pollution was forecasted.

#### 3.2 Alerts

Table 3-2 shows the number of alerts sent via the three main service distribution routes. The number of alerts sent are relative the number of service users, the areas they have selected and the number of ‘moderate’ or above forecasts produced in a month.

**Table 3-2: Alerts sent (January to February 2024)**

Period	Service type		
	Email	Text/SMS	Voice message
<b>2023 Total</b>	<b>3,319</b>	<b>2,481</b>	<b>44</b>
<b>January</b>	1	1	0
<b>February</b>	1	1	0
<b>Totals to date (2024)</b>	<b>2</b>	<b>2</b>	<b>0</b>

During February 2024 there was one email alert, one text/SMS alert and no voice alerts sent to subscribers across Sussex.

## Appendices

### Appendix A: Air Quality Bandings

Table A -1– UK Air Quality Bandings

Band	Index	Ozone	Nitrogen Dioxide	Sulphur Dioxide	PM2.5 Particles	PM10 Particles
		Running 8 hourly mean	Hourly mean	15 minute mean	24 hour mean	24 hour mean
		µg m-3	µg m-3	µg m-3	µg m-3	µg m-3

## Appendix C: Alert Service information from 2022 and 2023

The Sussex Alert service was operational from March of 2022; however, the service was updated in October 2022 with a new service and all users invited to re-register. The service was enhanced to provide more localised air quality forecasts instead of the general “West” and “East Sussex” and “Brighton only” forecasts and alerts. There are currently 32 different areas across Sussex that have specific forecasts.

**Table C -1– Subscribers 2022**

Service type	Email	Text/SMS	Voice message
Pre-October existing subscribers	37	14	0
<b>2022</b>			
<b>October</b>	150	129	3
<b>November</b>	99	90	2
<b>December</b>	21	13	0
<b>2023</b>			
<b>January</b>	7	2	0
<b>February</b>	6	2	0
<b>March</b>	3	2	0
<b>April</b>	2	3	0
<b>May</b>	4	3	0
<b>June</b>	15	10	0
<b>July</b>	9	4	0
<b>August</b>	6	4	0
<b>September</b>	1	1	0
<b>October</b>	4	1	0
<b>November</b>	2	3	0
<b>December</b>	0	0	0
<b>Total new subscribers</b>	<b>329</b>	<b>267</b>	<b>5</b>
<b>End of 2023 total subscribers</b>	<b>357</b>	<b>280</b>	<b>5</b>

Note: The total number of subscribers can vary from month to month, with some leaving as well as new people subscribing. The total at the end of the period includes all those who stayed with the service plus new recruits and leavers, hence the difference in the totals.
